

Starlink

FOR BUSINESS

Starlink is the world's first and largest satellite constellation using a low Earth orbit to deliver broadband internet capable of supporting streaming, online gaming, video calls and more.

How does it work?

Most satellite internet services come from single geostationary satellites that orbit the planet at 35,786 km. As a result, the round trip data time between the user and satellite—also known as latency—is high, making it nearly impossible to support streaming, online gaming, video calls or other high data rate activities.

Starlink is a constellation of thousands of satellites that orbit the planet much closer to Earth, at about 550km, and cover the entire globe. Because Starlink satellites are in a low orbit, latency is significantly lower—around 25 ms vs 600+ ms.

Product Specification

- 40–220+ Mbps Download
- 8–25+ Mbps Upload
- 20–60 ms Latency (round trip time Kit to Gateway)
- Inclusive of Starlink Kits (variants available)
- LOCAL PRIORITY for use within Philippines
- Top-up data on a per 50GB blocks available per request
- Service will be limited to 1Mbps download and 0.5Mbps upload after consumption of the recurring Priority data

Standard Kit

Provides high-speed, low-latency internet for activities like streaming and gaming, even in remote areas with a clear view of the sky. This easy-to-install, weather-resistant kit pairs.

Performance (Gen 3) Kit

Designed for mobility applications and challenging environments. With a wide field of view and enhanced GPS capabilities, it can connect to more satellites, allowing for consistent connectivity while on the go. The hardware is designed for a permanent installation and is more resilient to extreme environments.

Mini Kit

Starlink Mini is a compact, portable kit that can easily fit in a backpack, designed to provide high-speed, low-latency internet on the go.

Managed Services

Service offering that can be availed on top of the base plans, related to the operations and maintenance of their **STARLINK FOR BUSINESS** subscription.

Proactive Monitoring of Service Lines

Monitors customer service line and immediately takes actions in case of service interruptions. Customers no longer need to report and request a ticket.

Site Visit

Free four (4) site visits in case of service problems that require on site troubleshooting, repair or preventive maintenance, as seen needed.

Usage Report

Weekly usage report for the customer to show usage trends to ensure service is used as intended. Provides recommendations for upgrades and top-up requirements.

Monthly SLA and Service Performance Report

Monthly report showing service availability and service quality based on acceptable metrics as defined by STARLINK.
